

Harvesting
the rain.

Reflo™

commercial and
industrial sites.

Reflo™

Rainwater harvesting at large commercial/industrial sites or public sector developments is not only good for the environment, but it also makes financial sense. Any building with a large roof area and a high-demand for non-potable water can use a Reflo system to help solve storm-water management issues - and enjoy savings on municipal water.

Green Turtle is your one point of supply and responsibility for the entire Reflo rainwater harvesting system. The integrated Reflo control system ensures that the various components communicate seamlessly with each other.

The heart of the Reflo system is a high efficiency, low head-loss filtration device that uses no energy to operate, is self cleaning and can treat highly variable flows that are typical of rainwater runoff.

Green Turtle provides developers with commercial-grade rainwater harvesting systems that ensure the most cost-effective solution for their project. Every Reflo system is designed, installed and tested by trained personnel and comes with a 5 year warranty and after-sales support services.

Its high surface area design achieves extremely low Total Suspended Solids (TSS) effluent quality without overflowing a large percentage of the water or requiring the need for frequent filter changeouts.
