Green Turtle Launches the Proceptor Solids Interceptor

March 3, 2008. Green Turtle announced today the launch of its Proceptor Solids Interceptor. This new solids interceptor is based on the innovative technology that has been the hallmark of all Proceptor products.

The Proceptor Solids Interceptor can be used as a stand-alone interceptor or in tandem with oil and grease interceptors. It has many applications where there are large amounts of sand and silt such as airports, parking lots, car/truck washes and building loading docks.

Made of a corrosion-resistant and leak-proof composite, it is lightweight with an impressively large storage capacity – from 50 to 1,500 gallons. The tanks come in 62 inch and 96 inch lengths with heights ranging from 24 to 101 inches.

With an elliptical design, smooth inner walls, and easy pump-out design, Proceptor Solids Interceptors are easy to maintain and service. They are ideal for new builds and retrofits, with a small footprint as compared to other similar-capacity interceptors.

About Green Turtle

Green Turtle works with commercial, industrial and institutional customers to deliver innovative wastewater pretreatment solutions that meet local effluent requirements. Green Turtle provides systems that are flexible and easy to install and maintain, with industry-leading warranties.
