Green Turtle Introduces New Line of Holding Tanks

November 27, 2007. Green Turtle announced today the launch of its Holding Tank System, a holding tank technology engineered for storing a broad range of liquids safely and efficiently. The series has many applications, including hospitals, high corrosion chemical storage, water reclamation, grey water storage and rainwater cisterns.

Made of a corrosion-resistant and leak-proof composite, it is lightweight with an impressively large storage capacity – from 50 to 1,500 gallons. With an elliptical design, smooth inner walls, and easy pump-out design, it is easy to maintain and service.

These Holding Tank Systems are available with a double-wall construction and interstitial monitoring systems to provide additional strength and protection against possible leaks. Options such as level monitoring systems, automatic shut down valve and pump out systems are also available.

About Green Turtle

Green Turtle works with commercial, industrial and institutional customers to deliver innovative wastewater pretreatment solutions that meet local effluent requirements. Green Turtle provides systems that are flexible and easy to install and maintain, with industry-leading warranties.
