Canadian Patent 2,195,822
US Patent 5,726,912

Alternative to Precast Concrete or Mild Steel Grease Interceptors

Conceived by Zurn Green Turtle engineers as a game-changing alternative to precast concrete or mild steel offerings, Proceptor® was developed to provide an innovative solution to grease capture and retention. The result is a versatile, robust fiberglass interceptor that eliminates the corrosion and rust problems associated with unlined concrete and metal systems.

Unique shape & smooth wall design highlight only some of the benefits of Proceptor

Food waste grease and solids, when stored, create an extremely corrosive environment. **Both untreated precast concrete and metal are the wrong materials to use for the capture and storage of greasy wastewater.**

Superior Performance

Proceptor systems are engineered and built to deliver the best separation efficiency in the industry. Unlike typical rectangular precast concrete tanks or cylindrical metal tanks, the smooth walls and patented shape of Proceptor interceptors will not scour collected grease and carry it to the onsite septic system or downstream sewer system.

See animations showing the scouring issues associated with competitive systems

Highest Overall ROI

The unique shape and smooth walls that define Proceptor's performance also dictate its resistance to sediment and buildup. The result is a tank that is easy to clean and maintain, meaning pumping schedules and rates can be negotiated, where permitted. Also, as a result of construction materials that do not crack, corrode, break down or need replacement, the business owner can realize a lower total cost of ownership and a higher overall return on investment.

Business Sustainability

With precise and consistent build quality from an ISO 9001:2008 manufacturing facility, Proceptor is destined to deliver a lifetime of low-cost service and high performance. Owners can consider the purchase of Proceptor a well-informed and entirely sustainable solution for their business and for their community, and can feel comfortable knowing the choice of Proceptor is a decision they will only have to make once.
